

A rail-served industrial and logistics site with its own railway

11.07 ha · 700 m of railway track in ownership · lease until 2075, freely assignable

What we offer is not a plot of land but a prepared territory for a development project. The core of the asset is a combination of three things that rarely come together: a private railway track with a connection to the main line, a long-term land title that can be transferred without the lessor's consent, and fourteen registered buildings. No other site with its own rail connection is currently on the market in the Amur Region.

11.07 ha

land area

49 years

lease until 2075

700 m

railway track in
ownership

14

registered buildings

12 km

to the dry port by rail

~70 km

to the crossing into
China

Site boundaries from the state register, overlaid on satellite imagery. The plot runs along the railway right-of-way; the connecting station is Srednebelaya.

A former grain-receiving enterprise twelve kilometres by rail from the container terminal of the Blagoveshchensk Dry Port. The future owner decides what it becomes: we disclose what is known about the site and show which uses it objectively allows. The site is not ready for turnkey construction — exactly what remains to be done is listed under «What the site has and what it does not».

Site parameters

The figures come from extracts of the Unified State Register of Real Estate (EGRN), the lease agreement and the cadastral engineer's report. Copies of the documents are provided on request after a non-disclosure agreement is signed.

Land area	110,652 ± 233 m² (11.07 ha)
Cadastral number	28:14:010311:1
Plot dimensions	≈ 695 × 195 m, perimeter ≈ 1,910 m (from satellite imagery)
Address	Amur Region, Ivanovsky municipal district, Srednebelaya, Papulova st., 46
Land category	settlement land
Permitted use	for industrial purposes
Date of cadastral registration	16 April 2004
Title	lease, 49 years — from 19.06.2026 to 19.06.2075
Lease agreement	No. 22/26-ZUri of 19.06.2026, registered with the EGRN on 23.06.2026
Lessor	Property Management Committee of the Ivanovsky municipal district
Encumbrances and restrictions	no encumbrances, attachments or third-party claims registered
Buildings in ownership	14 units, 12,286.6 m² per the EGRN extracts
Railway track	700 m, cadastral number 28:14:010311:73, in ownership
Building coverage	about 11 % of the plot area
Connecting station	Srednebelaya, Blagoveshchensk — Belogorsk line, Trans-Baikal Railway
Road access	asphalt almost all the way to the site, the last 400 m are gravel

Free assignment — the key term of the lease

Clause 5.1.2 of the agreement: the lessee may transfer its rights and obligations under the agreement to a third party, sublease the plot, pledge the lease rights and contribute them to charter capital — without the lessor's consent; notification is sufficient. Clause 7.1: reorganisation of the parties and a change of the plot's owner are not grounds for termination.

In practice this means you can enter the project in any structure — purchase, assignment, contribution to the charter capital of a joint company — and none of them requires going to the administration for consent.

Check it yourself, before any conversation

The boundaries, area and title are registered in the state register. Enter the number in the search on the public cadastral map and compare it with our plan:

28:14:010311:1	land plot, 110,652 m²
28:14:010311:73	railway track, 700 m

Where to check: the public cadastral map (nspd.gov.ru/map) — paste the number into the search box; or the property reference service on the Rosreestr portal (lk.rosreestr.ru). These are government services and are occasionally unavailable — that has nothing to do with the property.

What the asset consists of

The railway is the core of the asset

A railway track 700 metres long, cadastral number 28:14:010311:73, built in 1992. Ownership was registered on 24.04.2018; no encumbrances are registered. The plot borders the railway right-of-way directly — no level crossing and no passage across third-party land are required. The connection to public tracks is restored under the technical conditions of the infrastructure owner; the application has been submitted.

Land title — 11.07 ha until 2075

A plot of 110,652 m², settlement land, permitted use — for industrial purposes. A 49-year lease: agreement No. 22/26-ZUri of 19.06.2026, registered on 23.06.2026. The agreement allows assignment, sublease, pledge and contribution to charter capital without the lessor's consent.

Buildings — 14 units, 12,286.6 m²

Capital buildings owned by the company and entered in the cadastre: grain warehouses, a four-storey tower, a weighbridge building, a brick substation. The buildings require reconstruction. A court-appointed construction expert examination confirmed that the strength grades of the reinforced-concrete structures comply with GOST 13015-2012 and SP 63.13330.2018 and that thirteen of the buildings can be reconstructed for their original purpose.

Site plan: the outline is traced from satellite imagery, the area and boundaries follow the state register. Dimensions and perimeter are indicative and will be refined by the land survey plan.

List of buildings

Cadastral number	Name	Area, m ²
28:14:010311:78	Grain warehouse No. 14	1,302.2
28:14:010311:74	Grain warehouse No. 11	1,266.7
28:14:010311:80	Grain warehouse No. 4	1,239.1
28:14:010311:95	Grain warehouse No. 12	1,212.9
28:14:010311:77	Grain warehouse No. 5	1,212.6
28:14:010311:81	Grain warehouse No. 13	1,190.4
28:14:010311:88	Grain warehouse No. 15	1,171.2
28:14:010311:76	Grain warehouse	1,094.8
28:14:010311:92	Grain warehouse No. 3	928.8
28:14:010311:89	Grain warehouse No. 6	875.2
28:14:010311:91	Materials store	394.4
28:14:010311:93	Drying and cleaning tower, 4 floors	308.3
28:14:010311:84	Truck weighbridge building	48.6
28:14:010311:79	Substation, 2 floors, brick	41.4
Total	14 buildings	12,286.6

The list and the areas follow the EGRN extracts and the 2012 purchase agreement. Railway track 28:14:010311:73 is registered separately and is not included in the total floor area.

Where it is

The village of Srednebelaya, Ivanovsky municipal district, Amur Region. The plot adjoins the right-of-way of the Blagoveshchensk — Belogorsk railway line; the connecting station is Srednebelaya. The site sits inside the region's crop-producing belt and, at the same time, within an hour's drive of two processing plants.

The site within the logistics network

Srednebelaya · Blagoveshchensk — Belogorsk line · Trans-Baikal Railway

The site stands between the field and the processing plant — inside the region's raw-material belt.

Distances are by road except those marked as by rail. To be refined when design documentation is prepared.

The site within the logistics network. Diagram, August 2026.

12 km	to the Blagoveshchensk Dry Port by rail
60 km	to Belogorsk — new processing capacity
~70 km	the Russia — China crossing: the Blagoveshchensk — Heihe bridge and the Kani-Kurgan checkpoint
75 km	to Blagoveshchensk
3–5 km	to the Blagoveshchensk — Belogorsk federal highway

The site stands where two flows cross. The domestic one runs between the farms of the region's south-west and the processing plants in Belogorsk. The export one is twelve kilometres by rail to the dry port and about seventy by road to the crossing into China. Which of the two becomes the main one is decided by the owner's project.

Distances are stated by the rightholder and will be refined during design documentation. The distance to the dry port is by rail, the others by road.

The region is turning its raw-material flow inwards

The Amur Region ranks first in Russia for soybean production, around 40 % of the national harvest. The 2025 crop was 1.7 million tonnes; the plan for 2026 is about 1.8 million. Until recently the surplus was shipped out of the region. That is now changing.

1.7 mn t

regional soybean crop, 2025

1st place

in Russia for soybean production

450 thou. t

processed within the region, 2025

~1.5 mn t

processing once new capacity is on stream

Sixty kilometres from the site, in Belogorsk, new processing capacity is coming on stream: from late 2026 soybean processing inside the region rises from 450 thousand tonnes to the order of 1.5 million tonnes a year. The direction of travel for agricultural raw materials is changing — instead of being shipped out of the region, it is drawn towards domestic processors. The site sits on that route.

Export infrastructure is developing in parallel. The Blagoveshchensk Dry Port — twelve kilometres away by rail — opened in May 2026, handles up to two container trains a day and is scaling simultaneous container storage to 15,000 by 2030. Since December 2025 the Kani-Kurgan road checkpoint has operated 16 lanes with a capacity of 862 vehicles a day.

Preferential regime

The plot lies within the area covered by the «Amurskaya» preferential regime. Applying the regime to the site requires its inclusion within the territory's boundaries — the procedure exists and the way to apply is known. The minimum capital investment threshold for a resident is 500 thousand roubles, which puts the regime within reach of a small project too.

The plot's cadastral quarter is not currently named in the schedule of the territory, so the regime does not apply automatically. The timing of the procedure depends on the authorities and we do not forecast it. A worked-through analysis of the applicable support measures and resident requirements is provided on request.

Sources: open publications of the Amur Region authorities and industry media for 2025–2026; verified as at the date of enquiry.

What can be placed here

The uses the site objectively allows, with the constraints on each. The final purpose is decided by the owner in line with their own plans.

Grain and soybean accumulation terminal

THE SITE'S HISTORICAL PROFILE

Intake by road from farms, cleaning and drying, storage and rail dispatch for processing. This matches the territory's history — it is a former grain-receiving enterprise. Sanitary clearance: 50 metres for floor-type storage, 100 metres for an elevator.

Open storage yard

NO CAPITAL CONSTRUCTION TO START WITH

Aggregates, rolled metal, timber, precast concrete, empty containers. Can be rolled out in stages. Within the protection corridors of the power lines, storage and parking of machinery require the grid company's approval.

Inland container yard

ROUTED THROUGH THE DRY PORT 12 KM AWAY

Accumulation of empty containers and stuffing of agricultural cargo for dispatch through the dry port. Shipping soybeans and grain in lined containers is an established format on the China route. Compatible with a grain terminal: the same consignment can leave either by wagon or by container.

Wagon stabling and marshalling

REQUIRES THE TRACK TO BE RESTORED

The 700-metre track holds around 45 wagons. It requires the track to be restored and to be included by the infrastructure owner in the list of tracks fit for stabling, as well as fencing and security for the site.

Rail-side mineral fertiliser warehouse

THE SANITARY ZONE NEEDS WORKING THROUGH

The logic of two seasons: fertiliser arrives by wagon in winter and spring, grain is dispatched in autumn. Constraint: above 50 tonnes the sanitary clearance is 300 metres, which within the settlement boundary requires separate study.

Production base, industrial park

DEPENDS ON ELECTRICAL CAPACITY

There is enough free land for new construction — building coverage is about 11 %. The determining factor is the available electrical capacity: a 10 kV line has been brought in, the amount of capacity is being confirmed with the grid company.

Grain accumulation terminal

Inland container yard

Wagon stabling and marshalling

The images are design visualisations of possible scenarios, not photographs of the site in its current condition.

Legal structure

The asset is assembled so that a buyer can enter the project and exit it without clearing anything with the local authority. Four provisions carry that.

Forty-nine years, until June 2075

The lease was concluded on 19 June 2026 for 49 years and registered with the EGRN on 23 June 2026. The term covers the full life cycle of any industrial project, including the payback period, and removes the question of extension from an investor's planning horizon.

Assignment without the lessor's consent

The agreement expressly grants the lessee the right to transfer its rights and obligations to a third party, to sublease the plot, to pledge the lease rights and to contribute them to charter capital — without the lessor's consent, subject to notification. In practice that is four available formats: sale of the lease right, sublease, a bank pledge, and a contribution to the charter capital of a joint company.

A change of owner does not break the agreement

Reorganisation of the parties and a change of the plot's owner are not grounds for unilateral amendment or termination of the agreement. A transaction at the level of the legal entity — a change of participants, reorganisation, an investor entering the capital — creates no risk to the lease right.

Title tested in court and clean in the register

Ownership of the railway track was registered in 2018 on the basis of a court judgment that had entered into legal force and the 2012 purchase agreement — both documents are cited in the EGRN extract as grounds for registration. For the land plot and the buildings, no attachments, mortgages, court claims or expropriation decisions are registered.

How the asset's history unfolded

Year	What happened
1992	The plot was assigned to the Srednebel'sky grain-receiving enterprise
2004	A cadastral number was assigned, area 110,652 m ²
2012	The property complex was acquired under a purchase agreement
2018	A court judgment recognised the company's ownership of the buildings, and it was registered
2021	A court expert examination confirmed the strength of the structures and the feasibility of reconstruction
2026	A 49-year land lease was concluded and registered, with no encumbrances

More than ten years of proceedings ended in the company's favour on every key point — the title has been tested in adversarial process.

Copies of the title documents, register extracts and court judgments are provided on request after a non-disclosure agreement is signed.

What the site has and what it does not

The site is not ready for turnkey construction, and we say so before the first conversation rather than after a visit. Missing utilities are a line in the project budget, and it belongs in the buyer's model from the outset.

It has

- Land title until 2075, freely assignable
- Fourteen buildings entered in the cadastre
- 700 m of railway track in ownership
- A direct boundary with the railway right-of-way
- A 10 kV power line at the site
- Asphalt access almost all the way to the plot
- No encumbrances, attachments or third-party claims

Still to be done

- Restoring the rail connection under the infrastructure owner's technical conditions
- Confirming the available electrical capacity with the grid company
- Bringing in water and sewerage
- Clearing the site of scrub and debris
- Fencing and lighting
- Reconstruction of the buildings

Constraints to allow for in the project

The plot lies within the settlement boundary, with housing adjoining on the south-east side. The size of the sanitary protection zone depends on the class of facility: grain storage — 50 metres, an elevator — 100 metres, a mineral fertiliser warehouse above 50 tonnes — 300 metres, a depot with equipment repair — 300 metres, a customs terminal — 500 metres.

Satellite imagery shows individual homesteads adjoining the southern and eastern boundaries closely, while the northern part of the plot is clear: from there to the nearest housing is some 250–300 metres. The building footprint therefore shifts north, and the southern part is left for access roads, parking and landscaping. The distances are taken from satellite imagery and are to be measured on the ground.

Two third-party power lines cross the plot: 0.4 kV and 10 kV overhead. Their protection zones are 2 and 10 metres to each side respectively. Within these corridors, construction, storage and parking of machinery require the grid company's approval.

Natural conditions: the village lies 4 kilometres from the Belaya river and is not on the list of flood-prone settlements kept by the Amur hydrometeorological centre.

Development constraints: protection zones and sanitary clearances

The diagram is schematic, not to scale. Measuring the actual distances is the first action when a scenario is worked through.

Indicative sanitary clearances of 50 / 100 / 300 metres. The diagram is schematic, not to scale; actual distances are to be measured when a scenario is worked through. August 2026.

How a project on this site begins

The order of a new owner's first steps. The timing depends on the authorities and the grid companies, so we do not forecast it — but the sequence is exactly this.

Step	What is done	What it determines
01	Technical conditions for the rail connection	An application to the infrastructure owner to restore the connection. Determines the cost of restoring the track and the permissible volume of wagon supply
02	Request for available capacity	An application to the grid company for the 10 kV feeder. The answer decides which scenarios are feasible — from a warehouse to a data centre
03	Measuring the sanitary clearances	On-site measurement of the distances to the nearest housing. Determines the class of facility and the position of the building footprint
04	Engineering surveys	Geology and assessment of the existing foundations for the loads of the future project

The first step has already been taken: the application for technical conditions has been submitted, and the material gathered passes to the buyer together with the asset.

What it costs to assemble a site like this from scratch

The buyer is not choosing between this site and another piece of land, but between this site and three or four years of their own approvals with an unknown outcome.

Component	Assembling from scratch	Time
11 ha of industrial land	3–6 mn RUB	up to 1.5 years
700 m of railway track with a connection	20–45 mn RUB	2–3 years
Grid connection for electrical capacity	10–25 mn RUB	1–1.5 years
Total direct costs	33–76 mn RUB	3–4 years

Design, expert review, the turnout and the approval of the connection come on top of that sum. And the point here is not the money but the right-hand column: the connection may simply not be approved, and then no amount of investment helps. On this site the track is registered as real estate and is in ownership — restoring an existing connection is incomparably simpler than obtaining a new one.

Benchmarks from open data of contracting organisations, not an estimate. Given to gauge the cost of recreating the asset, not as its price: the terms of a transaction are discussed individually.

How you can enter the project

The structure of the transaction is open to discussion; there are no rigid frames. The lease agreement allows the right to be disposed of without the lessor's consent, so five formats are available — from an outright purchase to a long-term lease.

Investment in the project with a share split

The investor enters the capital, the parties split the shares and develop the site together. A format for those who want to share both the investment and the result with the current owner.

Joint venture

The lease rights are contributed to the charter capital of a newly created company and the partner provides the funding. Contributing the rights to charter capital is expressly permitted by the agreement and does not require the lessor's consent.

Assignment of the lease together with the buildings

The lease right passes to the acquirer for the remaining term — until 2075 — and the buildings are transferred at the same time. The lessor's consent is not required; notification is enough.

Acquisition of the company

Purchase of shares in the company that holds the buildings and the lease right. The asset passes in full, and the lease is not renegotiated when the participants change.

Long-term lease of the site

The site, in whole or in part, is subleased for an operational task — with no change of lessee and no transaction over the asset. The lessor's consent is not required.

Your own deal structure

If none of the formats fits your task, describe it. Terms are discussed individually.

What we hand over on request

The asset package is assembled. Documents are handed over after a non-disclosure agreement is signed — usually within one business day of the enquiry.

- Extracts from the real estate register for the land plot and for the railway track
- The land lease agreement with its annexes
- Title documents for the buildings
- The cadastral engineer's report: boundary plan and aerial survey with the buildings located on it
- The report of the court construction and technical expert examination
- An extract from the register of legal entities
- A 38-page investment memorandum and the financial model
